Key features

First class devices thanks to first class signals

- Purest signals
 - Excellent SSB phase noise in base unit: < -120 dBc (typ.) for 10 GHz at an offset of 20 kHz
 - Outstanding SSB phase noise with option: < -132 dBc (typ.) for 10 GHz at an offset of 10 kHz
 - Lowest close-in SSB phase noise: < -83 dBc (typ.); f = 10 GHz, offset = 10 Hz
 - Virtually no wideband noise: < -162 dBc (typ.) at 10 GHz and an offset of 30 MHz
- Lowest harmonic and nonharmonic signal components
 - Very low harmonic signal components over the entire frequency range even at very high output power
 - Very low nonharmonic signal components of < -90 dBc (typ.) at 10 GHz

Very high output power without compromise

- · Exceptionally high output level
 - Ultra high output power up to 38 dBm with the 6 GHz model
 - Over 30 dBm at 18 GHz and 28 dBm at 20 GHz with the 20 GHz model
 - More than 30 dBm from 20 GHz to 35 GHz with the 40 GHz model
 - More than 19 dBm up to 70 GHz with the 67 GHz model
- · Excellent level accuracy and repeatability for CW signals, narrow pulses and modulated signals

User friendly in every detail

- · Flexible 2 HU or 3 HU housing
- 3 HU with larger 7" display and multiple front panel connectors
- Ergonomic operation thanks to state-of-the-art GUI with touch display

R&S®LegacyPro: refresh your technology

- Plug and play the R&S®SMA100B in an automated test system without changing the test software
- Emulation of R&S®SMA100A, R&S®SMF100A, Keysight PSG, Keysight MXG, etc.

Definitions

General

Product data applies under the following conditions:

- Three hours storage at ambient temperature followed by 30 minutes warm-up operation
- Specified environmental conditions met
- · Recommended calibration interval adhered to
- · All internal automatic adjustments performed, if applicable

Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as $\langle , , \rangle$, \geq , \pm , or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with <, > or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are indicated as follows: "parameter: value".

Typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

Introduction

Frequency options and step attenuator technology

Prerequisite is to install one of the following frequency options.

	Overview of installed step attenuator modules		
Frequency option	Electronic step attenuator up to 20 GHz	Mechanical step attenuator for complete frequency range	
R&S®SMAB-B103/-B106/-B112/-B120	•	_	
R&S®SMAB-B131/-B140(N)/ -B150(N)/-B167(N)	-	•

R&S®SMAB-B167(N) with R&S®SMAB-B39 option	•	•	

• = installed, - = not available

If both, electronic and mechanical step attenuators are installed, the electronic step attenuator is used up to 20 GHz as default setting.

If the R&S®SMAB-B36S super ultra high output power option is installed, the electronic step attenuator is used up to 20 GHz. Above 20 GHz the mechanical step attenuator is used.

Platform height options and hardware configurations

Depending on the hardware configuration the R&S®SMA100B is available with:

- 2 height units (2 HU; R&S®SMAB-B92 option) or
- 3 height units (3 HU; R&S®SMAB-B93 option).

The height unit option is together with the frequency option a prerequisite.

Notes:

- An ultra high output power option requires the corresponding high output power option to be installed.
 For example, R&S®SMAB-K31 is a prerequisite for R&S®SMAB-B32.
- R&S®SMAB-B36S super ultra high output power option requires R&S®SMAB-K36 ultra high output power option and R&S®SMAB-B35 high output power option.

R&S®SMAB-K703 option (1 GHz reference)

When this option is installed, the user can use the 1 GHz low noise input and output for synchronization.

In WIDE mode, the signal generator will use this signal directly as a reference for the synthesizer.

This option should be used if a very high phase stability between multiple generators is required.

The 100 MHz low noise input and output mode is only available with this option.

R&S®SMAB-K704 option (variable reference input)

When this option is installed, the user can set the reference input frequency in 0.1 Hz steps between 1.0 MHz and 100 MHz.

The signal generator will lock its internal reference oscillator on the input frequency.

The reference output frequency can be set independently from the input frequency.

Note on choosing the proper reference synchronization bandwidth

The user has the choice to set the synchronization bandwidth either to NARROW or WIDE.

In WIDE mode, the best possible phase stability is achieved.

The phase noise performance close to the carrier depends on the phase noise of the external signal source.

In NARROW mode, the reference PLL acts as a clean-up-loop in which the phase noise is mainly determined by the signal generator's internal reference source. This mode is recommended when using external reference sources with close-to-carrier phase noise worse than the R&S®SMA100B (i. e. rubidium standards).

Please note that due to the slow synchronization, reference locking can take up to 10 seconds.

Measured relative phase versus time of two R&S $^{\circ}$ SMA100B instruments at f = 1 GHz carrier frequency, coupled with 1 GHz reference frequency (R&S $^{\circ}$ SMAB-K703 option)

Measured relative phase versus time of two R&S $^{\circ}$ SMA100B instruments at f = 10 GHz carrier frequency, coupled with 1 GHz reference frequency (R&S $^{\circ}$ SMAB-K703 option)

Measured relative phase versus time of two R&S $^{\circ}$ SMA100B instruments at f = 56 GHz carrier frequency, coupled with 1 GHz reference frequency (R&S $^{\circ}$ SMAB-K703 option)

Specified and measured maximum available output power versus frequency

Measured level linearity of high dynamic uninterrupted level sweep with the R&S®SMAB-K724 option

Measured level repeatability and ambient temperature over 46 h. The figure shows the very high level repeatability at 15 dBm output level for 1 GHz and 10 GHz carrier frequency. During two consecutive measurements, the output level was set to different random level values

Additional performance options

Differential clock synthesizer (R&S®SMAB-B29 option)

The R&S®SMAB-B29 option provides a differential or single-ended clock signal with selectable waveform and DC offset up to 3 GHz or up to 6 GHz with the R&S®SMAB-K722 option.

The R&S®SMAB-K722 option is not available for instruments equipped with the 3 GHz R&S®SMAB-B103 RF frequency option. The frequency of the clock synthesizer (R&S®SMAB-B29 option) can be set independently of the RF frequency of the R&S®SMAB100A.

Specifications above 3 GHz are only valid for instruments equipped with the R&S®SMAB-K722 option.

Extended warranty with a term of one and two years (WE1 and WE2)

Repairs carried out during the contract term are free of charge ²⁷. Necessary calibration and adjustments carried out during repairs are also covered.

Extended warranty with calibration coverage (CW1 and CW2)

Enhance your extended warranty by adding calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated, inspected and maintained during the term of the contract. It includes all repairs ²⁷ and calibration at the recommended intervals as well as any calibration carried out during repairs or option upgrades.

Extended warranty with accredited calibration (AW1 and AW2)

Enhance your extended warranty by adding accredited calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated under accreditation, inspected and maintained during the term of the contract. It includes all repairs ²⁷ and accredited calibration at the recommended intervals as well as any accredited calibration carried out during repairs or option upgrades.

²⁶ For options that are installed, the remaining base unit warranty applies if longer than 1 year. Exception: all batteries have a 1 year warranty.

²⁷ Excluding defects caused by incorrect operation or handling and force majeure. Wear-and-tear parts are not included.
